If you continue to use this site we will assume that you are happy with it. Phase-transfer catalyst - Wikipedia Phase-transfer catalysis is a special form of heterogeneous catalysis. Ionic reactants are often soluble in an aqueous phase but insoluble in an organic phase in the absence of the phase-transfer catalyst. Phase Transfer Catalysis Home Page PTC Organics is the only company dedicated exclusively to developing high-performance low-cost processes for the manufacture of organic chemicals using Phase-Transfer Catalysis to improve customer process performance and profit.

phase transfer catalysis - an overview | ScienceDirect Topics Phase-transfer catalysis is a useful procedure for a variety of interesting metal-catalyzed reactions. 54,55 However, only one example of this approach has been reported for the synthesis of diynes by the sp²-sp carbon coupling reaction. Phase Transfer Catalysis | ScienceDirect Phase Transfer Catalysis: Principles and Techniques outlines the theory, mechanism, and kinetics of the phase transfer catalysis (PTC) process. This book surveys the principal reaction types that have employed the PTC, including the typical experimental procedures for preparing catalysts and conducting representative types of chemical reactions. The Basic Principle of Phase-Transfer Catalysis, Some ... phrase phase transfer catalysis, and although some would tend to disagree with calling the PT cycle a catalytic process in the true sense of the word catalysis, the terminology has been well established and stays, especially since only catalytic amounts of the phase-transfer agents are required for effective phase-transfer action.
